CALCIORGANICO® / Features:

- This product consists of Humus which is directly active within the soil, derived exclusively from the blend and humification of selected manures (cattle and poultry manures) that have undergone a fermentation – humification process for approximately 8 / 9 months.
- This product is not subjected to any artificial drying process (with the use of ovens or hot air).
- The added calcium component is minced finely and has a rapid effect if integrated with the soil; it aims at balancing the soil, bringing it back towards neutrality and an acid pH. Its action is also enriched by the presence of the organic matrix which is rich with biological activity as described above.
